Planning Process - week 2

0.1   Introduction

In this second week we are going to talk about the research, personas, storyboard/scenario, wireframe and prototype.
In the different steps I am going to talk about the thought about each task and explain why I did what I did and show with some picture and some links to the prototypes.
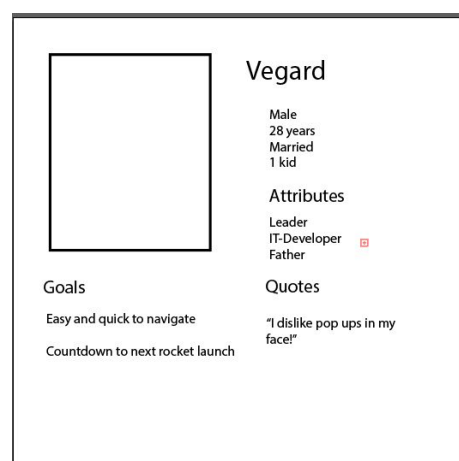

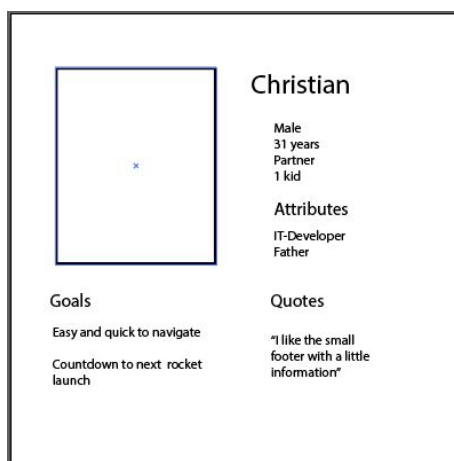

1 Research

I started the process to look at spaceX and NASA's website to look at what I like and what I do not like. I also got over another website named space.com. I am going to explain what I liked about the difference website and dislike.

SpaceX - It has a very good overview, looks neat and beautiful. I do not have much dislike about this page except that it is not mobile responsive and I think it was a bit hard to understand where in the hover where I was. One example is if you go to gallery and click on one of the pictures, there is nothing that says where in the website you are.
like.

NASA - It has nice old history pictures and looks good with the colour combination with the black, gray and white. It also has a good mobile response, but look a bit clutter with all the text even though it has it marked up with the squares.

SPACE - There is a nice menu and that the content follow it down, but it does goes a bit out and do not follow as I would do it. Nice Mobile responsive, but there is a lot of information on one page and also has a lot of pages. I did got some pop ups which I am not a fan of and the page is a bit slow.

Goals

Easy and quick to navigate

Countdown to next rocket launch

Quotes

"I dislike pop ups in my face!"

3   Storyboards

Create a storyboard helps you organize your thoughts and It maps out all the components
of your site and how they interrelate. Creating a website storyboard can help you
plan and organise your website and even plan the internal linking structure between
pages. Using a storyboard you can plot a visitors path through your website to find
your most important pieces of content.

4   Wireframe

4.1   Desktop-version

Homepage

I was so excited when I first made this wireframe. The menu looks quite neat, but when you have the mouse over one of them the picture slides down. One big picture that has a slideshow with different pictures.

Falcon 9, Falcon Heavy and Dragon

I was inspired by the spaceX website to have a big picture on the header with a slideshow of different picture of the rocket page you are on. The content on the side of the long and thin image of the rocket.

4.2   Mobile-version

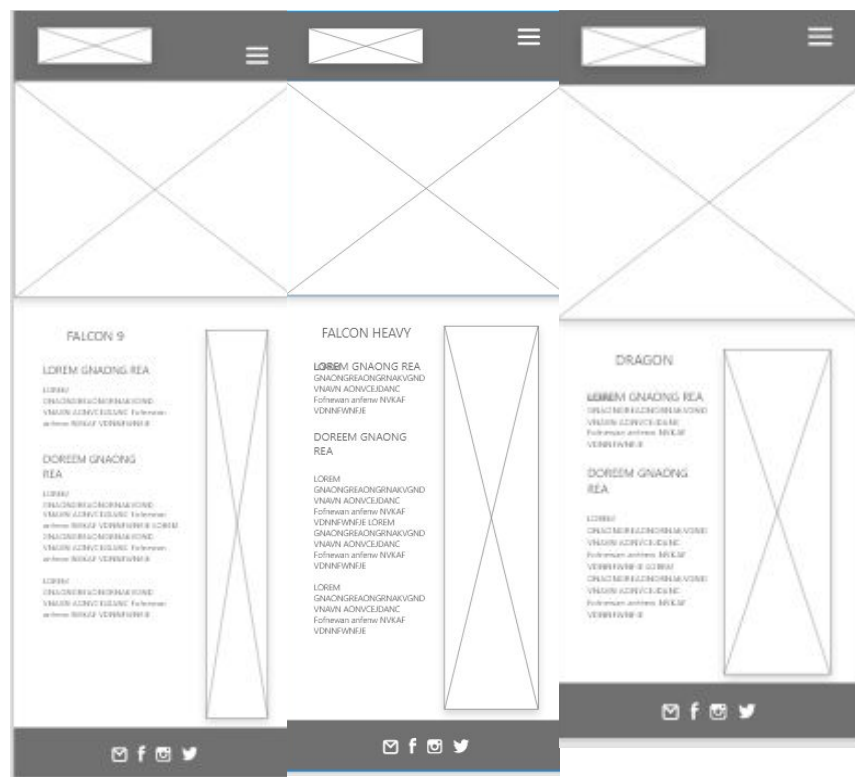

Homepage

At the homepage my thought was to make it look neat and to look beautiful. At the header picture I was thinking of slideshow of images and the countdown I was not sure about how I wanted it yet.

Falcon 9, Falcon Heavy and Dragon

At all of the product pages I was thinking of the same about the slideshow of images of each rocket at the one page and the content beside the picture so the site would not be so long.

5   Prototype

At the prototype you will see how I want the website to look like when the exam is over. Some few edition was there since I forgot to make a contact page and saw that there was some differences at the homepage and the other websites. So I changed the dragon page to a Contact page and changes the menu at the homepage so it looked the same as the other ones. Also did some small changes on the mobile version at "Falcon 9" and "Falcon Heavy" by switching the picture of the rocket to under the text so the text is more WCAG for the ones who have low vision.

5.1   Picture of all of the pages for mobile version.

For better look at the prototype click HERE.

5.2   Picture of all of the pages for desktop version

For better look at the prototype click HERE.
